An individual unit of organic material of irregular shape and size, which is
 composed of a single or several cells, and which is capable of independent
 reproduction, is called a microorganism. The term microorganism is used to
 designate those organisms which are too small to be seen with the unaided
 eye. Microorganisms are found in all environments, both living and non-living.
 They are the most numerous and diverse group of organisms on Earth. They
 are found in soil, water, air, and on the surfaces of plants and animals.
 Some microorganisms are beneficial to humans, while others are harmful.
 They play a major role in the biogeochemical cycle of matter and energy
 in the environment. Microorganisms are also used in the production of
 food, medicine, and other products. The study of microorganisms is called
 microbiology.
